

## Broadmoor Hospital rolls-out state of the art technology

West London NHS Trust's new state of the art hospital has installed Oxehealth's Digital Care Assistant (DCA) in every room of its new hospital. The use of Digital Care Assistant further enhances Broadmoor's inpatient mental health care, reinforcing its commitment to provide both patients and staff with the most advanced technology available to improve safety and promote wellbeing.

The Digital Care Assistant has been installed across most of the site (178 rooms) with one area to be completed.

The Digital Care Assistant provides contact-free patient monitoring, including giving staff access to vital signs measurements. It helps clinicians plan patient care and intervene proactively - improving patient safety, the quality of care provided and improving patient experience.

This deployment at the new Broadmoor Hospital shows the potential for mental health professionals globally to deploy innovative technology to deliver a step change in inpatient mental health care.

Leeanne McGee, Director of High Secure and Forensic Services at West London NHS Trust said: "We are delighted to have rolled out this technology across Broadmoor Hospital. The Digital Care Assistant will help provide additional support to staff to enhance patient experience as well as ensuring even better patient safety within a high secure environment."

Hugh Lloyd-Jukes, chief executive of Oxehealth, said "The new Broadmoor hospital is a high secure hospital facility providing state of the art facilities for patients and staff. We are delighted that West London NHS Trust have decided to continue their six-year partnership with Oxehealth and build the Digital Care Assistant into their standard of care for all patients. We hope the service will play a significant role in enabling Broadmoor's clinicians to establish a new international standard for patient safety, quality and experience in the years to come."

Ends

### About West London NHS Trust:

West London NHS Trust provides a full range of mental health, physical healthcare and community services for children, adults and older people living in the London boroughs of Ealing, Hammersmith & Fulham and Hounslow, in addition to specialist and forensic mental health services, including high secure services at Broadmoor Hospital in Crowthorne, Berkshire. It cares for around 100,000 people each year, serves a local population of 800,000 residents and employs 3,700 staff.

### **About Oxehealth**

Oxehealth is a global leader in vision-based patient monitoring and management services. We help clinicians to deliver safer, higher quality and more cost-efficient care. Our Digital Care Assistant platform enables staff to plan patient care better and to intervene proactively to help patients.

The Digital Care Assistant provides staff with a wider range of clinically validated early warning signs and risk factors than any other technology plus the ability to check the patient visually before choosing their intervention.

Our Oxehealth Service supports customers to deploy the Digital Care Assistant platform to use it to create proactive, data-enabled systems of care that deliver not only a step change on deploying the system but also year on year continuous improvement in safety, quality and cost efficiency.

The Oxehealth Service is relied on by one in three English mental health trusts as well as acute hospitals, care homes, skilled nursing facilities, prisons and police forces in the UK and Europe.
